Information Disclosure Statement

1. The information disclosure statement filed on April 18, 2005 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered. A copy of the foreign patent DE4326779 should be provided.

Claim Rejections - 35 USC § 112

2. Regarding claims 4,5,7 and 8, the phrase "preferably" renders the claims indefinite because it is unclear whether the limitation(s) following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

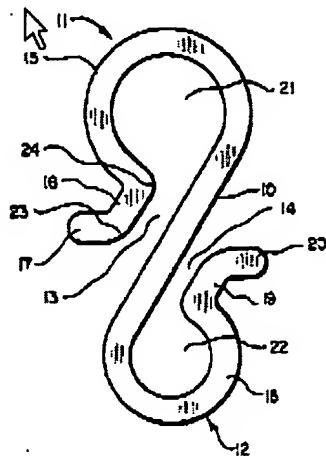

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Swenson et al. (US Patent No. 5,575,446).

longitudinally opposite symmetrical shapes that are displaced outside and present lightly rounded internal grooves (21,22). (See below).

Regarding claims 4 and 5, Swenson et al. discloses a single piece (11) with a predetermined varying thickness. Regarding claims 6 and 7, Swenson et al. discloses a single piece made of a plastic that is flexible and non-corrosive. (See col. 3, lines 27-30).

5. Claims 1-6 and 8 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Felcher (US Patent No. 5,497,636).

Regarding claim 1-3, Felcher discloses an item fastener characterized in that it is made in a single piece (10), comprising a central body (11) from which derives at least two lateral projections (14,18) that are extended in opposite directions and have longitudinally opposite symmetrical shapes that are displaced outside and present lightly rounded internal grooves (12a,17a). (See below).
